Course Overview

This Facilitator Guide supports the delivery of the WSQ course Manage AI Agents with Paperclip (TGS-2023036646), conducted by Tertiary Infotech Academy Pte Ltd (UEN: 201200696W). The course is delivered over 2 days comprising 14 hours of training and 2 hours of assessment.

Paperclip is an open-source organisational control plane for AI agents — a Node.js server with a React user interface and an embedded PostgreSQL database — that gives a team of agents an org chart, issues, budgets, approval gates and a durable audit trail. Learners install and prove a control plane, build a goal-aligned agent company, decompose a mission into verifiable work, and operate that company under routines, layered budgets, approvals and an auditable activity log. The defining separation taught throughout is that Paperclip manages the company while adapters run the agents.

The guide sets out the mapping of the course to the Skills Framework, the learning units and their underpinning knowledge and abilities, the day-by-day lesson plan with instructional methods and slide references, and the structure and duration of training and assessment.

Skills Framework	ICT
TSC Category	Development and Implementation
TSC Code	ICT-DIT-3003-1.1
TSC Title	Applications Integration
TSC Description	Integrate data and functions across application programs, and perform follow up tests to verify proper functioning
TSC Proficiency Level	4
Course Duration	2 days · 14 training hours + 2 assessment hours = 16 hours
Recommended Class Size	20
Mode of Delivery	Physical classroom, instructor-led with hands-on practical labs
TSC Abilities and Knowledge	
TSC Abilities: A1: Install and verify a Paperclip control plane and record observable evidence of a healthy instance. A2: Create a goal-aligned company with a measurable mission, a CEO and a budgeted reporting tree with confined workspaces. A3: Decompose a mission into a parent and specialist child issues, run them sequentially and verify each hand-off against acceptance evidence. A4: Apply a paused routine, layered budget caps and an approval gate, then reconstruct the operation from the activity log. TSC Knowledge: K1: Agentic AI and the Paperclip control-plane model — what Paperclip is, what it is not, and the control-plane / runtime separation. K2: Feasibility of a multi-agent company — when coordination earns its cost and when a single agent is the correct choice. K3: The company, mission, CEO, org chart, adapter and workspace model used to integrate and develop an agent company. K4: Issues, goal lineage, assignment, heartbeats and hand-off acceptance used to verify behaviour between disparate components. K5: Routines, layered budgets, approvals, the activity log and the operator intervention ladder used to resolve issues and modify the operation.

Resources Required
• Standard training equipment — computer/laptop per learner, projector or large display, whiteboard • Node.js 20 or later on each learner laptop, with a normal (non-elevated) user shell • Paperclip control plane installed locally and served on port 3100 • A trainer-approved local agent runtime for each learner (adapter) • Reliable Wi-Fi with outbound access to the npm registry • Course slide deck, Learner Guide, lab guides and synthetic lab data sets • Flip chart paper and markers; paper tape / Blu Tack
Abbreviations
Learner's Guide (LG) · Facilitator's Guide (FG) · Assessment Plan (AP) · Lesson Plan (LP) Learning Unit (LU) · Learning Outcome (LO) · Technical Skills and Competencies (TSC) WA-SAQ: Written Assessment (Short-Answer Questions) · PP: Practical Performance C: Competent · NYC: Not Yet Competent

Learning Outcomes

On completion of this course, learners will be able to:

- LO1: Identify agentic AI opportunities and perform feasibility scans to determine when a Paperclip-managed multi-agent company is the appropriate solution.
- LO2: Utilise Paperclip to integrate agent runtimes, data and skills, and develop a goal-aligned AI agent company with an org chart, workspaces and budgets.
- LO3: Perform tests in Paperclip to verify that agents, issues, hand-offs and routines function correctly between disparate components.
- LO4: Resolve technical issues in Paperclip and implement modifications to the agent company, its governance controls and its cost boundaries.

Learning Units

Learning Units (LUs)	Mapping of Knowledge and Abilities Statements
LU1: Fundamentals of Agentic AI and Paperclip	Topics: Topic 1: Fundamentals of Agentic AI and Paperclip • What makes a system agentic — reasoning, tool use, memory and autonomy (K1) • Paperclip as an organisational control plane: what it is and what it is not (K1) • The control-plane / runtime separation — Paperclip manages the company, adapters run the agents (K1) • The four pillars and the twelve subsystems of the platform (K1) • The heartbeat execution model and its five triggers (K1) • Feasibility scan — when a multi-agent company earns its coordination cost (K2, A1) • Installing and proving a healthy control plane; the host → control plane → adapter → agent diagnosis ladder (A1) Practical Activities: • Lab 1: Install Paperclip and Prove the Control Plane (ClipReel Studio) LO1: Identify agentic AI opportunities and perform feasibility scans to determine when a Paperclip-managed multi-agent company is the appropriate solution. Mapping of Knowledge and Abilities: K1: Agentic AI and the Paperclip control-plane model — what Paperclip is, what it is not, and the control-plane / runtime separation. K2: Feasibility of a multi-agent company — when coordination earns its cost and when a single agent is the correct choice. A1: Install and verify a Paperclip control plane and record observable evidence of a healthy instance.
LU2: Building AI Agents with Paperclip	Topics: Topic 2: Building AI Agents with Paperclip • Onboarding, deployment modes and the embedded database (K3, A2) • A measurable mission — target, metric and boundary

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

	(K3, A2) • The CEO and the strict single-manager org chart (K3, A2) • The six fields of an agent contract: role, manager, adapter, instructions, heartbeat, budget (K3) • Role instructions as a contract — purpose, allowed inputs, output schema, exclusions, escalation (K3, A2) • Workspaces, secrets and skills; confining each role with git worktrees (K3, A2) • Runtime adapters and proving readiness with a marker run (K3, A2) Practical Activities: • Lab 2: Create the BrightFunnel Company, Mission and CEO (Digital Marketing) • Lab 3: Build the Meridian Reporting Tree and Validate Runtime Boundaries (Finance) LO2: Utilise Paperclip to integrate agent runtimes, data and skills, and develop a goal-aligned AI agent company with an org chart, workspaces and budgets. Mapping of Knowledge and Abilities: K3: The company, mission, CEO, org chart, adapter and workspace model used to integrate and develop an agent company. A2: Create a goal-aligned company with a measurable mission, a CEO and a budgeted reporting tree with confined workspaces.
LU3: Developing Intelligent Multi-Agent Systems	Topics: Topic 3: Developing Intelligent Multi-Agent Systems • Projects, goals and goal lineage — mission → project goal → parent issue → child issue (K4, A3) • The seven issue states; done and cancelled are terminal (K4) • Parent synthesis issues and specialist child issues, created unassigned (K4, A3) • Assignment as the heartbeat trigger; sequential, attributable runs (K4, A3) • Acceptance criteria that name the evidence, not the activity (K4, A3) • Verifying between disparate components — issue ID, run log, comment, workspace diff, cost entry (K4, A3) • Status is not evidence; bounding every wait (K4, A3) Practical Activities: • Lab 4: Translate the Ledgerly Mission into Assigned Issues and Hand-Offs (Accounting) • Lab 5: Verify NorthPoint Routines and Layered Budget Controls (Stock Trading Research) LO3: Perform tests in Paperclip to verify that agents, issues, hand-offs and routines function correctly between disparate components. Mapping of Knowledge and Abilities:

Lesson Plan and Instructional Methods

Instructional methods

The following instructional methods are used across the two days. Each is selected to match the nature of the underpinning knowledge or ability being developed.

Instructional Method	Purpose and Use in This Course
Lecture	Used to present the Paperclip control-plane model, the twelve subsystems, the heartbeat execution model, the issue lifecycle and the governance controls. Kept short and interleaved with demonstration so no block of exposition runs beyond about 20 minutes.
Didactic Questioning	Used to check understanding of the facts that are most often confused — the five heartbeat triggers, the seven issue states, the 80% / 100% budget thresholds and the three parallel budget scopes — and to draw out learners' own operational judgement during the feasibility discussion.
Demonstration	The facilitator performs each Paperclip operation live on the projected screen before learners attempt it: onboarding and the doctor diagnostic, hiring the CEO, creating an unassigned issue tree, assigning a child, reading a workspace diff, and processing an approval.
Hands-On Practical	Six laboratory activities, each on a separate simulated company with its own synthetic data set. Learners build, run and verify the operation on their own machines and record observable evidence for every step.

Note on evidence: throughout the practical activities, facilitators should insist that learners produce observable evidence rather than assertions. A green connection badge is not proof that an adapter works — a marker run that writes a named file in the correct workspace is. An issue marked Done with no linked artifact and no workspace diff is an unverified claim.

Lesson Plan

Day 1

Theme: Agentic AI foundations, the Paperclip control plane, and building your first goal-aligned AI agent company

Time	Instructions for Facilitator	Instructional Methods	Resources
0900hrs – 0915hrs (15 mins)	Digital Attendance (AM) Mandatory SSG digital attendance is taken via the TRAQOM QR code before instruction begins. Verify every learner has checked in before proceeding.	-	QR Attendance, Attendance Sheet, Laptop, TV, Wi-Fi
0915hrs – 0930hrs (15 mins)	Welcome, trainer and learner introductions, ground rules, learning outcomes, course outline and briefing on the assessment that closes Day 2.	Lecture	Slide page #2-19, TV, Whiteboard, Wi-Fi
0930hrs – 1100hrs (90 mins)	Topic 1: Fundamentals of Agentic AI and Paperclip • What makes a system	Lecture, Didactic Questioning, Demonstration	Slide page #20-30, #31-37, TV, Whiteboard, Wi-Fi

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

	agentic — reasoning, tool use, memory and autonomy. • Paperclip as an organisational control plane: a Node.js server with a React UI on port 3100. Stress what it is NOT — not an agent framework, not a chatbot, not a workflow builder. • The defining separation: Paperclip manages the company, adapters run the agents. • The four pillars and the twelve subsystems. • The heartbeat as a bounded execution window with FIVE triggers: a schedule/interval tick, a task assignment, an @-mention in a comment, a manual Run Heartbeat, and an approval being resolved. Check understanding that the interval trigger is off by default.		
1100hrs – 1115hrs (15 mins)	Morning Tea Break	-	-
1115hrs – 1300hrs (105 mins)	Topic 1 continued: feasibility and the diagnosis ladder • Lead a discussion on when coordination earns its cost — same inputs, tools, authority and verification means ONE agent. • Walk the host → control plane → adapter → agent ladder; fix the earliest broken link first. Activity: Lab 1 — Install Paperclip and Prove the Control Plane (ClipReel Studio). Facilitator's Guidance: the facilitator explains and demonstrates the activity, then circulates while learners build it themselves. Facilitators are encouraged to invite learners to share their own results with the class and to draw on their own operational experience so the practice stays grounded in real work.	Demonstration, Hands-On Practical, Didactic Questioning	Slide page #38-42, Learner laptop (Node.js 20+), Paperclip control plane, Lab guide, TV, Wi-Fi
1300hrs – 1400hrs (60 mins)	Lunch Break Digital Attendance (PM) is taken on return from lunch.	-	QR Attendance, Attendance Sheet, Laptop, TV, Wi-Fi
1400hrs – 1530hrs (90 mins)	Topic 2: Building AI Agents with Paperclip • Onboarding with paperclipai onboard --yes; deployment modes as a	Lecture, Didactic Questioning, Demonstration	Slide page #43-50, TV, Whiteboard, Wi-Fi

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

	security decision (local_trusted, authenticated+private, authenticated+public). • A measurable mission — target, metric and boundary. Contrast 'grow the channel' with a verifiable statement. • The strict hierarchy: every agent reports to exactly ONE manager; the CEO alone has none. • The six fields of an agent contract and the five sections of a role instruction, with the exclusions section emphasised. • Workspaces, scoped secret injection at heartbeat time, and importable skills.		
1530hrs – 1545hrs (15 mins)	Afternoon Tea Break	-	-
1545hrs – 1745hrs (120 mins)	Activity: Lab 2 — Create the BrightFunnel Company, Mission and CEO (Digital Marketing); Lab 3 — Build the Meridian Reporting Tree and Validate Runtime Boundaries (Finance). Check that every learner sets the COMPANY budget cap before hiring, binds each agent to its own workspace, and proves each adapter with a marker run rather than a connection badge. Facilitator's Guidance: the facilitator explains and demonstrates the activity, then circulates while learners build it themselves. Facilitators are encouraged to invite learners to share their own results with the class and to draw on their own operational experience so the practice stays grounded in real work.	Demonstration, Hands-On Practical	Slide page #51-59, Learner laptop (Node.js 20+), Paperclip control plane, Lab guide, TV, Wi-Fi
1745hrs – 1800hrs (15 mins)	Review of Day 1 topics, consolidation of the control-plane and org-chart model, and Q&A. Confirm PM digital attendance is complete.	Lecture, Didactic Questioning	TV, Whiteboard, Wi-Fi, QR Attendance, Attendance Sheet, Laptop, TV, Wi-Fi
1800hrs	End of Day 1	-	-

Day 1 training time: 8 hours (inclusive of tea breaks, exclusive of the 1-hour lunch break).

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Day 2

Theme: Multi-agent operations: decomposition, hand-offs, routines, budgets, approvals and the closed audit loop

Time	Instructions for Facilitator	Instructional Methods	Resources
0900hrs – 0915hrs (15 mins)	Digital Attendance (AM) Mandatory SSG digital attendance via the TRAQOM QR code, followed by a short recap of Day 1 and a check on any unfinished lab environment.	Lecture	QR Attendance, Attendance Sheet, Laptop, TV, Wi-Fi
0915hrs – 1030hrs (75 mins)	Topic 3: Developing Intelligent Multi-Agent Systems • Projects, goals and goal lineage — company mission → project goal → parent issue → child issue. • The SEVEN issue states: backlog, todo, in_progress, in_review, done, plus blocked and cancelled. Stress that done and cancelled are TERMINAL — issues do not move backwards. • Decomposition into a parent synthesis issue plus specialist child issues, created UNASSIGNED. • Assignment is the trigger — assign one child at a time to keep runs sequential and attributable. • Acceptance criteria that name the artifact, its path and its required fields.	Lecture, Didactic Questioning, Demonstration	Slide page #60-68, TV, Whiteboard, Wi-Fi
1030hrs – 1045hrs (15 mins)	Morning Tea Break	-	-
1045hrs – 1230hrs (105 mins)	Activity: Lab 4 — Translate the Ledgerly Mission into Assigned Issues and Hand-Offs (Accounting); Lab 5 — Verify NorthPoint Routines and Layered Budget Controls (Stock Trading Research). Require learners to trace one thread across issue ID, run log, comment, workspace diff and cost entry, and to show non-overlapping run timestamps as proof of sequence. Reinforce that status is not evidence. Facilitator's Guidance: the facilitator explains and demonstrates the activity, then circulates while learners build it themselves. Facilitators are encouraged to invite learners to share	Demonstration, Hands-On Practical, Didactic Questioning	Slide page #69-77, Learner laptop (Node.js 20+), Paperclip control plane, Lab guide, TV, Wi-Fi

	their own results with the class and to draw on their own operational experience so the practice stays grounded in real work.		
1230hrs – 1330hrs (60 mins)	Lunch Break Digital Attendance (PM) is taken on return from lunch.	-	QR Attendance, Attendance Sheet, Laptop, TV, Wi-Fi
1330hrs – 1430hrs (60 mins)	Topic 4: Deploying and Managing AI Agents • Routines created PAUSED, with an explicit cron expression AND an IANA timezone (e.g. 30 16 * * *, Asia/Singapore). • Budgets: THREE scopes enforced in PARALLEL — company (monthly), agent (monthly) and project (lifetime). A two-stage circuit breaker at exact thresholds: 80% records a warning and the agent keeps running; 100% pauses the agent with pauseReason = budget. Enforcement happens at checkout, not at billing. • Three approval types (CEO Strategy, Hire Agent, Budget Override) and three responses (approve, reject, request revision); approvals never expire on their own. • The activity log, the audit loop, and the intervention ladder: inspect → pause → reassign → terminate.	Lecture, Didactic Questioning, Demonstration	Slide page #78-88, TV, Whiteboard, Wi-Fi
1430hrs – 1445hrs (15 mins)	Afternoon Tea Break	-	-
1445hrs – 1515hrs (30 mins)	Activity: Lab 6 — Run the Governed TalentBridge Operation and Close the Audit Loop (HR). Learners reconstruct the whole operation from the activity log into a mission-to-evidence audit map and account for any unexplained gap. Facilitator's Guidance: the facilitator explains and demonstrates the activity, then circulates while learners build it themselves. Facilitators are encouraged to invite learners to share their own results with the class and to draw on their own operational experience so the practice stays grounded in real work.	Demonstration, Hands-On Practical	Slide page #89-93, Learner laptop (Node.js 20+), Paperclip control plane, Lab guide, TV, Wi-Fi
1515hrs – 1545hrs (30 mins)	Course recap across all four learning units, consolidation of the corrected technical facts (seven issue states,	Lecture, Didactic Questioning	Slide page #94-104, TV, Whiteboard, Wi-Fi

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

	five heartbeat triggers, 80%/100% thresholds, three parallel budget scopes), TRAQOM course-evaluation survey and Q&A.		
1545hrs – 1600hrs (15 mins)	Briefing for Assessment Explain the purpose, methods, duration and conditions of both instruments; brief candidates on the appeal process; confirm identity documents; take the mandatory SSG digital attendance (Assessment).	Lecture	Slide page #94-104, QR Attendance, Attendance Sheet, Laptop, TV, Wi-Fi
1600hrs – 1700hrs (60 mins)	Written Assessment — Short-Answer Questions (WA-SAQ) 5 open-ended knowledge questions covering K1–K5. Individual, summative, open book.	Written Assessment	WA-SAQ question paper, LMS (lms-tms.tertiaryinfotech.com), Laptop, Wi-Fi
1700hrs – 1800hrs (60 mins)	Practical Performance (PP) 4 hands-on Paperclip tasks covering A1–A4. Individual, summative, open book.	Practical Performance	PP question paper, Paperclip control plane, Learner laptop, LMS, Wi-Fi
1800hrs	End of Day 2 / End of Course	-	-

Day 2 training time: 6 hours (inclusive of tea breaks, exclusive of the 1-hour lunch break), followed by 2 hours of assessment.

Total Hours

Training Hours: 14 hours

Assessment Hours: 2 hours

Total Hours: 16 hours

Day	Training Hours	Assessment Hours	Total
Day 1	8 hrs	–	8 hrs
Day 2	6 hrs	2 hrs	8 hrs
Total	14 hrs	2 hrs	16 hrs

Structure & Duration of Training & Assessment

Training Contact Time (inclusive of tea breaks)	Assessment Contact Time		
Training Contact Time (inclusive of tea breaks)	**Written Assessment (Short-Answer Questions)**	**Practical Performance (PP)**	**Total**
14 hrs	1 hr	1 hr	**16 hrs**

Classroom Training

0900 hrs to 1800 hrs (Day 1 and Day 2)

Assessment

1600 hrs to 1800 hrs (Day 2)

Summary of Assessment Requirement:

Learning Outcomes	Assessment Methods
LO1: Identify agentic AI opportunities and perform feasibility scans to determine when a Paperclip-managed multi-agent company is the appropriate solution.	WA-SAQ, PP
LO2: Utilise Paperclip to integrate agent runtimes, data and skills, and develop a goal-aligned AI agent company with an org chart, workspaces and budgets.	WA-SAQ, PP
LO3: Perform tests in Paperclip to verify that agents, issues, hand-offs and routines function correctly between disparate components.	WA-SAQ, PP
LO4: Resolve technical issues in Paperclip and implement modifications to the agent company, its governance controls and its cost boundaries.	WA-SAQ, PP

Assessment duration and ratio

Method	Duration	Ratio (Assessor : Candidate)	Remarks
Written Assessment, WA-SAQ	1 hr	Min: 1:3 Max: 1:20	5 open-ended short-answer questions covering K1–K5. Individual, summative, open book.
Practical Performance, PP	1 hr	Min: 1:3 Max: 1:20	4 hands-on Paperclip tasks covering A1–A4. Individual, summative, open book.
Total	2 hrs	–	–

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

A minimum of 75% attendance is required for a learner to be eligible for assessment and for course fee funding. Mandatory SSG digital attendance is taken via the TRAQOM QR code in the morning, in the afternoon and again before the assessment on Day 2.
